

ABSTRACT

A method for dart games includes attaching a reference line generating device to a dart board or to a wall, to generate one or more reference lines in front of the dart board as toe lines, and to
5 avoid the users or the players from drafting the reference lines or the toe lines manually, and from drafting the reference lines or the toe lines every time when the players are going to play the dart games. The reference line generating device includes a light generating device received in a housing and supported on a circuit
10 board, and adjustable to various angular positions, for generating the reference lines or the toe lines.
